

Mobile Service Shop

Management Web App

Simplified Requirements Document • v2.0

June 2026

Scope reduced from full-feature system to a lean MVP

1. Project Overview

A lightweight web-based service management system for a mobile phone repair business with 5 branches. This document defines a **simplified MVP scope** — the heavy financial-automation features from v1.0 have been removed. The focus is on digital job-card management, basic service tracking, and a new Super Admin control layer.

Item	Detail
Business	Mobile phone service / repair shop
Branches	5 branch locations + 1 admin layer
User Roles	Super Admin · Tenant User
Scope	Internal use by shop staff only (not customer-facing)
Replaces	Manual handwritten job cards and paper records
What is removed	Auto profit calc, billing split, Excel/PDF export, audit log

2. User Roles

Three tiers of access, each isolated from higher tiers.

Role	Who	Access Level
Super Admin	Platform owner (you & your team)	Full platform control — manage tenants, approve accounts, enable/disable features globally
Tenant User	Shop owner / staff (branch user)	Access their own shop only — create jobs, update service status, manage parts & models

3. Super Admin (New Role)

The Super Admin is the platform-level owner. This role sits above the business Admin and controls what each tenant (business) is allowed to do inside the app.

3.1 Dashboard Overview

- See a list of all registered tenants (business accounts)
- See total number of active users per tenant
- See whether each tenant's account is active or suspended
- Casual summary view — no deep financial data

3.2 Tenant & User Management

- Approve or reject new tenant (shop) registrations
- Set the maximum number of Tenant User accounts allowed per tenant
- Suspend or reactivate a tenant account
- Reset passwords for tenant users

3.3 Feature Toggle Controls

Super Admin can enable or disable the following features for each tenant individually:

Feature / Button	Controlled By	Status
Add New Service (Job Card) button	Super Admin	Enabled by default
Add New Part option	Super Admin	Enabled by default
Add New Device Model option	Super Admin	Enabled by default
Service Status Update	Super Admin	Enabled by default
Parts Management module	Super Admin	Enabled by default
Printable Job Card	Super Admin	Enabled by default
Printable Service Receipt	Super Admin	Disabled by default
Branch Dashboard access	Super Admin	Enabled by default

■ Feature toggles are per-tenant. Disabling a feature hides the button/section from that tenant's users without deleting any data.

4. Tenant User Role

Each shop (branch) has one Tenant User account. This is the shop owner or staff member who manages day-to-day service operations. Each tenant user sees only their own shop data.

4.1 Dashboard

- See today's open and completed jobs
- See pending jobs list
- Quick access to add a new service

4.2 Capabilities

- Create new service / job cards
- Update service status and technician notes
- Add parts used in a service
- Add and manage device brands and models
- Add and manage parts (name, cost, selling price)
- View and search own job records with filters
- Print job card and service receipt (if enabled by Super Admin)

5. Core Modules

5.1 Job Card / Service Entry

- Auto-generated Serial Number (e.g. BR1-20260603-001)
- Customer Name & Phone Number
- Mobile Brand and Model (dropdown)
- IMEI Number
- Problem Description
- Received Date (auto-filled, editable)
- Assigned Technician
- Branch Name (auto-assigned from user's branch)
- Service Status → Received | Checking | Waiting for Parts | Repaired | Delivered | Cancelled

5.2 Service Update

- Add repaired / fixed items
- Add replaced parts (from parts list)
- Add technician notes
- Add customer approval notes
- Update delivery date
- View service history / update log

■ *Parts cost at time of entry is saved with the service record. Future cost changes do not affect historical records.*

5.3 Parts Management

- Add new parts with name, cost price, selling price
- Assign compatible device models
- Update prices (historical records unaffected)

5.4 Device Model Management

- Manage brands: Apple, Samsung, Xiaomi, Vivo, Oppo, Other
- Add / edit models per brand

- Models appear in dropdowns when creating a job card

6. Search & Filters

- Search by Customer Name
- Search by Phone Number
- Search by IMEI Number
- Search by Job Card Number
- Filter by Date Range
- Filter by Service Status
- Filter by Branch (Admin only)

7. Feature Changes — Old vs New

Summary of what was simplified or removed from v1.0:

Feature	Old Version	New Version
User roles	Admin + Branch User (2 roles)	Super Admin + Tenant User (2 roles)
Profit auto-calculation	Full formula included	Removed
Sales / revenue tracking	Auto-generated totals	Removed
Cash / Bank / Credit payment split	Full payment breakdown	Removed
Branch-wise profit reports	Admin dashboard widget	Removed
Technician performance report	Included	Removed
Parts usage report	Included	Removed
Excel export	Included	Removed
PDF export	Included	Removed
Data backup module	Included	Removed
Audit log	Full update history	Removed
Daily closing report	Auto-generated	Removed
Job Card (printable)	Included	Kept
Service Receipt (printable)	Included	Kept – toggle
Service status tracking	Included	Kept
Parts management	Included	Kept
Device model management	Included	Kept
Search & filters	Included	Kept
Super Admin role	Not present	New – Added

Feature toggle controls	Not present	New – Added
Tenant / user quota management	Not present	New – Added

8. MVP Screens (Simplified)

#	Screen	Role
1	Login	All
2	Super Admin Dashboard	Super Admin
3	Tenant Management	Super Admin
4	Feature Toggle Settings	Super Admin
5	Tenant User Dashboard	Tenant User
6	Add New Service / Job Card	Tenant User
7	Service List (with search/filter)	Tenant User
8	Service Details / Update	Tenant User
9	Parts Management	Tenant User
10	Device Models Management	Tenant User

9. Recommended Tech Stack

Layer	Technology
Frontend	React.js or Next.js
Backend	Node.js (Express) or Django
Database	PostgreSQL or Supabase
Authentication	JWT-based secure login (Role-aware)
Hosting	Cloud-based (accessible from all branches)

This document supersedes v1.0. Financial modules can be re-added in a future phase once the core service tracking workflow is stable.
